

B O Y D

A close-up photograph of a modern desk lamp. The lamp features a large, textured, golden-brown shade that is slightly curved. A circular white light source is visible through a hole in the shade, mounted on a white cylindrical stem. The background is a soft, out-of-focus grey.

B O Y D

Introducing Boyd Lighting's two new fixtures series: Element and Totem. One minimal and the other decorative, both are inherently Boyd, combining style and performance. Focusing on creative and beautiful designs, energy efficiency and the supremely flawless finishes you trust, Boyd's engineers and craftspeople have come up with two unique options for residential, commercial and hospitality spaces.

Four LED in-wall fixtures make up the Element series, cleverly called Wind, Water, Fire and Earth. The narrow, recessed-mounted rectangular boxes each have a unique backplate which reflects the light in its own unique way. Illuminated from the sides by hidden LEDs, the Element is perfect for corridors, beside vanity mirrors or anywhere that ambient light is needed. They join our collection of other in-wall fixtures - Portal, Sunbeam and the mirrored Emanation.

The Totem family reimagines designs from the 1950s and harkens back to early American modernism. Featuring stacked, adjustable oval and trapezoid shapes, the nostalgic LED sconces and pendants are available in a variety of finish combinations and shape compositions. Perfect for large hospitality open spaces or in private residences.

With energy efficiency standards becoming more commonplace, Boyd is committed to offering high performing, meticulously made, stylish LED fixtures. We hope you enjoy the curated selection throughout this catalog.

LEFT: Shown with a White Primed frame and 22k Yellow Gold Leaf

EMANATION LED MIRRORED IN-WALL

The Emanation provides punctuations of visible light on any custom mirror.

Filtered, non-glare light glows through a mirrored faceplate to illuminate ones' face.

It is recessed mounted to be flush with the surrounding mirror for uninterrupted reflection.

An etched pattern runs along the faceplate, which is just over three inches wide.

A variety of glass types, faceplate patterns, and color temperatures.

The ability to be mounted horizontally or vertically, as well as the ability to customize the HOA, give this fixture enormous versatility for any interior style.
